1. Brainstorming & Ideation Phase

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Phase Document

Introduction

The project focuses on automating the standard laptop procurement process using ServiceNow Flow Designer. The idea was developed to reduce repetitive manual work and make approved laptop requests easier to process.

Problem Identification

Standard laptop requests may require several manual activities such as reviewing the request, waiting for approval, updating task information, and assigning the task to the appropriate Hardware team. Manual handling can increase processing time and create the possibility of missed updates.

Brainstorming Points

- Automate the standard laptop request workflow.
- Start the process after a request is approved.
- Automatically update the task short description.
- Automatically assign the task to the Hardware assignment group.
- Provide a clear and traceable workflow.
- Reduce repetitive manual activities.

Proposed Idea

Create a ServiceNow Flow Designer flow named “Standard laptop task”. The flow automates the required actions after an eligible laptop request is approved.

Expected Benefits

- Reduced manual effort.
- Consistent task processing.
- Faster assignment to the Hardware team.
- Improved process visibility.
- Better traceability of workflow execution.
