2. Requirement Analysis Phase

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Phase Document

Project Requirement

The system should automate the standard laptop procurement workflow after the required request approval condition is satisfied.

Functional Requirements

- The system must receive or identify the relevant laptop request.
- The workflow must respond to the required approval/process condition.
- The flow must update the short description as defined by the project.
- The flow must assign the task to the Hardware assignment group.
- The flow execution should be traceable in ServiceNow.

Non-Functional Requirements

- Reliability: the flow should execute consistently.
- Maintainability: flow steps should be easy to understand and update.
- Usability: the process should require minimal manual intervention.
- Security: the workflow should operate using appropriate ServiceNow permissions.
- Traceability: execution and resulting task updates should be verifiable.

Software Requirements

- ServiceNow instance with Flow Designer.
- Web browser.
- GitHub account for project submission and version management.

Inputs and Outputs

Input: standard laptop request and its approval/process state. Process: automated Flow Designer actions. Output: updated task information and assignment to the Hardware group.
