5. Project Development Phase

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Phase Document

Development Environment

The project is developed in ServiceNow using Flow Designer. The configured flow is named “Standard laptop task”.

Flow Configuration

- Open ServiceNow.
- Navigate to Flow Designer under Process Automation.
- Create a new flow.
- Set the flow name to Standard laptop task.
- Use the required application and run-as settings.
- Configure the request/approval-related trigger or condition.
- Add the action to update the required short description.
- Add the action to assign the task to the Hardware assignment group.
- Save and test the flow.

Implementation Logic

When the configured standard laptop request reaches the required approval/process condition, Flow Designer executes the configured actions. The task information is updated and the task is assigned to the Hardware group.

Development Evidence

The GitHub development folder should contain screenshots showing the flow properties, trigger/condition, actions, configured fields, and successful execution.

Implementation Status

The project implementation is based on the ServiceNow Flow Designer workflow described in this documentation. Final screenshots should reflect the exact configuration in the submitted ServiceNow instance.
